

Actuators

## Series EA Actuators

For use with VB-7000 Series or VB-9000 Series valve bodies from Barber-Colman and many other commercially available rotary shaft valve bodies with crankarms. Also for use with HVAC and combustion air dampers

Used for two position floating and proportional control of dampers and valves in industrial applications. Typical applications are heat treat furnaces, ovens, heat recovery systems, water or oil cooling systems. These actuators provide the requirements of both damper control and valve control applications where it is desirable to move the load in either direction or to stop it at any point in the stroke, All models contain feedback slidewires for true position-proportional control.

## Low Torque, Medium Torque, and Spring Return <br> (Series EA40, EA50, and EA60)

## Features:

- Proportional Actuators with Built-in Feedback Potentiometer
- Spring Return and Non-spring Return Models Available
- $24 \mathrm{Vac}, 120 \mathrm{Vac}$ and 240 Vac Models Available
- Oil Immersed Motor and Gear Train
- SPDT Auxiliary Switch Standard

## High Torque

(Series EA70)

## Features:

- Proportional Actuators with Built-in Feedback Potentiometer
- 120 Vac and 240 Vac Models Available
- Die Cast Housings with Four 1/2" Conduit Openings
- Oil Immersed Motor and Gear Train
- SPDT Auxiliary Switch Standard

## Current to Position Converters and Resistance to Position Converters for Electric Actuators <br> (Series 658, 659)

## Features:

- Solid State Switching Output
- Fast Response
- Adjustable Zero, Span and Deadband
- Two Wire Input from Controller
- Operates with 90 to $1000 \Omega$ Feedback Slidewire in Electric Actuator
- Burner Purge (Optional)

The Series 658 is a current to position converter which is typically located electrically between a primary controller and an electric actuator. The Series 659 is a resistance to position converter which is typically located electrically between a retransmitting slidewire and an electric actuator. Models 658A and 659A are designed for mounting directly to the side of the actuator; models 658B and 659B are designed with a mounting flange for securing it to any flat surface.

## EA40 Series

## EA40 Series

The spring return actuator will proportionally position a fuel valve, butterfly valve, damper and similar devices which require return to a normal position on power interruption. The output shaft is power operated in both directions. An internal electrical holding circuit maintains the proper damper position at setpoint. The enclosed spring drives the output shaft and gear train to return the damper to a normal position on power interruption. Power consumption is 28 W . Standard features includes $100 \Omega$ internal feedback slidewire and single internal SPDT switch. Shipping weight, 8 lbs .

- Spring Return Actuator
- Low torque

## EA50, EA60 Series

## EA50 \& EA60 Series

The medium torque actuator is ideal for proportional positioning of a fuel valve, butterfly valve, damper and similar applications. Units are available with either fixed or adjustable speed. Timing of adjustable speed units can be increased (decreasing the speed) by turning a slotted adjustment screw on the outside of the case. Adjust range is approximately ten times rated. Power consumption is $40 \mathrm{~W} .100 \Omega$ feedback slidewire and a single SPDT switch are standard features. Shipping weight, 8 lbs.

## Specifications

## - Medium Torque, Gear Train - Non-Spring Return Actuator

## EA70 Series

## EA70 Series

The high torque actuator will position a heavy damper, globe valve, blast gate, air or gas valve. It can be used for vortex control and hydraulic coupling, and will drive a speed changing screw or slide gate requiring a torque proportional actuator. Power consumption is 190 W . Standard features include $100 \Omega$ feedback slidewire and a single SPDT switch. Shipping weight, 30 lbs . Weather resistant models are NEMA 4.

## NEMA 4 Weather Resistant Cover Kit:

Kit No. AM-369 (option 37) for EA70 Series; Kit No. A-9301 for EA 40, 50 and 60 Series.

## Auxiliary Switch:

A built-in, cam operated, snap acting, SPDT switch is normally included. The point of switch actuation is readily adjustable, but is factory set to close one contact and open the other at the end of the clockwise stroke. The auxiliary switch housing is not weather resistant.

| Rating: | 120 Vac | 240 Vac |
| :--- | :--- | :--- |
| Running Current | 5.8 Amps | 2.9 Amps |
| Locked Rotor | 34.8 Amps | 17.4 Amps |
| Non-Inductive | 12 Amps | 6 Amps |

Maximum total load not to exceed 2000 VA.

## Rear Slidewire:

## (Retransmitting Slidewire)

5 W variable resistor for driving other actuators in parallel. Slidewire housing is weather resistant. Plate size for all kits is $4-1 / 8^{\prime \prime} \mathrm{W} \times 6-7 / 8^{\prime \prime} \mathrm{H}$. Box depth as shown in photo caption. When ordering rear slidewire kit (actuator model no. option 31, 32, 33, 41, 42 or 43), write complete part number as shown.

## MEDIUM TORQUE AND LOW TORQUE

Side View
1/2" conduit K.U. (two each side)

Low and medium torque and spring return output shafts have a standard 12 tooth spline. Reference ANSIB5.15. Mounting should be upright for the longest life. Models with adjustable speed must not be mounted upside down or with the output shaft upward.

## HIGH TORQUE

Front View
Side View

## 658 Series

## 658 Series Current to Position Converters for Electric Actuators

The Series 658 is a current to position converter which is typically located electrically between a primary controller and an electric actuator. Model 658A is designed for mounting directly to the side of the actuator; model 658B is designed with a mounting flange for securing it to any flat surface.
The electric actuator's position is proportional to the input current from the primary controller. A built-in potentiometer

Model 658B with in-Panel Flange mounts

Model 658A mounted on the left side (standard) of an electric actuator in the electric actuator, with wiper arm driven by the output shaft, provides a feedback signal to the Series 658 to produce the proportional action. A change in current from the source driv the electric actuator in a direction to restore balance and return the process to the setpoint.
The signal input ordered is factory set, but is adjustable in the field to accept spans such as 4 to 20,2 to 12,7 to 12,4 to 12 , and 12 to 20 mA . The Series 658 has a standard input impedance of $250 \Omega$ for current output primary controllers.
A special option (65 or 66 in the model number) is available on Model 658A that provides an extra input lead (white) for activation of the purge option used on a burner control. A dry contact closure between the purge input and the input+ (red) wires will drive the actuator full open to provide $100 \%$ flow for air purge of a gas burner.
Converters with special "option 65" are wired for mounting on the left side of the actuator; converters with "option 66" are wired for the right side of the actuator.

UL recognized under the Components Program (except specials)

- Solid State Switching Output
- Adjustable Zero, Span and Deadband
- Two Wire Input from Controller
- Operates with 90 to $1000 \Omega$ Feedback Slidewire in Electric Actuator
- Burner Purge (Optional Feature)

## Specifications

| Input Signal: | Adjustable to controller spans ranging from 4 to 16 mAdc . Input circuit is isolated from both output circuit and ground. | Overranging: | No effect from 100\% overrange signal. |
| :---: | :---: | :---: | :---: |
|  |  | Deadband: | Deadband is the difference betwee the input signal which will drive the motor one way and the level which will drive it the other way. The percent of deadband adjustment is dependent on the input signalspan. For example, 2 to $12 \mathrm{~mA}-2 \%$ to $8 \%$ of input span; 4 to $20 \mathrm{~mA}-1.2 \%$ to 4.8\% of input span. |
| Input Signal Zero: | Adjustable from 2 to 16 mAdc . |  |  |
| Input Impedance: | $250 \Omega$. Other impedances obtained by adding external series or parallel resistors. |  |  |
| I/O Connections: | Color coded pigtail leads on Model658A. Numbered barrier terminal strip on Model 658B. | Linearity: | 0.15\% of slidewire. |
|  |  | Ambient Temperature |  |
| Load: | Low, medium or high torque electric actuators. | Limits: | -25 to $58^{\circ} \mathrm{C}$. |
|  |  | Power Consumption: | 7.0 VA at 120 or $240 \mathrm{Vac}, 50$ or 60 Hz . |
| Feedback Slidewire Inputs: | 90 to 1000. $\Omega$ | Maximum Continuous Output Current Rating: | 2.0 Amp at 24 to 240 Vac rms. |
| Grounded Input: | Grounding any input wire will not cause damage. | Line Regulation: | 120 or $240 \mathrm{Vac}, \pm 10 \%$ variation, with fixed input signal offset of $1 \%$ maximum. |
| Open Circuit Input: | Will drive actuator to low position. | Mounting: | Upright recommended (as shown) for |
| Series Operation: | No offset in control point when operated in tandem. |  | Model 658A, but other positions are acceptable. |
|  |  | Shipping Weight: | Series 658 only, three pounds. |

0-64 $\quad 10$ to 20 mAdc input signal into $250 \Omega$
0-65 Purge option, left side mount (Model 658A only)
0-66 Purge option, right side.mount (Model 658A only)
0-67 Right side mount, no purge (Model 658A only)

## Typical Applications

Dual output heat/cool controllers with outputs of 2 to 12 mAdc or 4 to 20 mAdc constant current and on/off.

One promarey controller can drive up to 12 electric actuators by means of the Series 658, special 56 converters. Input impedance is $127 \Omega$

Mounting Dimensions (see page 15 )

## 659 Series

## 659 Series Resistance to Position Converters for Electric Actuators

The Series 659 is a resistance to position converter which is typically located electrically between a retransmitting slidewire and an electric actuator. The primary application of the Series 659 is in tandem operation of electric actuators.

Triac switching in the Series 659 drives the actuator through an angular direction corresponding to the position of the master control slidewire. A built-in potentiometer in the actuator, with wiper arm driven by the output shaft, provides a correctional feedback signal to the Series 659 to provide proportional action. The triac switching and feedback continues until balance is reached. Deadband, which is the difference between the input signal which will drive the motor one way and the level which will drive it the other way, is adjustable from $0.1 \%$ to $8 \%$ of the master control slidewire span. A deadband is recommended for less critical processes, since it will reduce mechanical wear on the actuator.

Model 659B with in-Panel Flange mounts

Model 659A mounted on the left side (standard) of an electric actuator

UL recognized under the Components Program (except specials)

- Solid State Switching Output
- Fast Response
- Adjustable Deadband
- Input from 100 to $1000 \Omega$ Slidewire

## Specifications

| Input Signal: | 100 to $1000 \Omega$ slidewire |
| :--- | :--- |
| Zero and Span: | no adjustment |
| Input/Output <br> Connections: | Color coded pigtail leads on Model 659A. <br> Numbered barrier terminal strip on Model 659B. |
| Load: | Low, medium or high torque electric actuators. |
| Feedback Slidewire <br> Inputs: | 100 to $1000 \Omega$ to match input resistance. |
| Grounded Input: | Grounding either or both input wires will not cause damage. |
| Deadband: | Adjustable from $0.1 \%$ to $8 \%$ of input signal span |
| Linearity: | $0.15 \%$ of slidewire. |
| Ambient Temperature -25 to $58^{\circ} \mathrm{C}$. <br> Limits:  |  |
| Power Consumption: | 7.0 VA at 120 or 240 Vac, 50 or 60 Hz. |
| Maximum Continuous <br> Output Current Rating: | 2.0 Amp at 24 to 240 Vac rms. |
| Line Regulation: | 120 or 240 Vac, $\pm 10 \%$ variation, with fixed input signal offset of $0.5 \%$ maximum. |
| Mounting: | Upright position recommended (as shown) for Model 659A, but other positions are acceptable. |

## Typical Application

Mounting Dimensions for 658 Current to Position
Converters and 659 Resistance to Position Converters
Overall Dimensions: in millimeters (inches).
$136.52[5.375] \mathrm{H} \times 139.7$ [5.5] W $\times 69.85$ [2.75] D.

Models 658A and 659A

Note: Dimensions slightly different on units designed for mounting to high torque actuators

Models 658B and 659B

Two actuators driven in tandem. Position limiting resistors are on the second actuator.
